

What is claimed is:

1. A method of communicating information to a user using a first computer on a network, the method comprising the acts of:

- retrieving a first network resource over the network;
- prompting the user to select a second computer on the network;
- communicating the subject matter of the first network resource to the second computer; and
- retrieving supplemental information from the second computer, wherein the supplemental information is relevant to the subject matter of the first network resource.

2. A method of communicating information to a user using a first computer on a network, the method comprising the acts of:

- retrieving a first network resource over the network;
- communicating the subject matter of the first network resource to a second computer, wherein the second computer is chosen based on characteristics of the first network resource;
- retrieving supplemental information from the second computer, wherein the supplemental information is relevant to the subject matter of the first network resource;
- retrieving a second network resource over the network;
- communicating the subject matter of the second network resource to a third computer, wherein the third computer is chosen based on characteristics of the second network resource; and
- retrieving supplemental information from the third computer, wherein the supplemental information is relevant to the subject matter of the second network resource.

3. A method comprising the acts of:

- presenting a first network resource to the user; and
- communicating the subject matter of the first network resource to a plurality of computers on a network.

4. The method of claim 3, further comprising the act of:

- receiving a response from the plurality of computers on the network, wherein the response relates to additional network resources that are relevant to the subject matter of the first network resource.
